

Problem with C++ ==> It is platform dependent
 Java ==> It is platform independent

MLL is having one big problem, it is o.s(platform) dependant

Using Notepad ==> create java file(.java) ==> java code

Every java program should be written inside a class

1) create a class

main function(c) ==> main method(java)

command ==> javac ==> Java Compiler comes

javac Launch.java

javac filename

Command Prompt

Launch.java ==> HLL

Launch.class ==> Byte Code

to call jvm

java Launch

Launch.java

```
class Launch{
    public static void main(String[] args){
        System.out.println("Hello Java");
    }
}
```
